DETAILED ACTION

RCE

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 12, 2004 has been entered.

Response to Arguments

Applicant's arguments filed February 12, 2004 have been fully considered but they are persuasive with respect to claim 12. Applicant's arguments with respect to claim 21 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21 and 22 are rejected under 35 U.S.C. § 102(b) as being anticipated by Gilbert, US 4012652.

Art Unit: 2834

Gilbert shows:

A stator comprising

a first part (1a, figure 5) having a first middle portion with a through hole, and M pieces of extending portions extending from said first middle portion;

a second part (1b, figure 5) having a second middle portion with a through hole, and N pieces of extending portions extending from said second middle portion;

wherein said M pieces of extending portions of said first pad are alternately bent toward a first direction and said N pieces of extending portions of said second part are alternately bent toward a second direction opposite to said first direction, respectively, to constitute a columnar portion of said stator when said first and second parts are correspondingly combined together,

where M and N are even numbers not less than four, respectively,

a coil (2) wound around said columnar portion and wrapped in said first and second parts when said residually unbent extending portions of said first and second parts are bent toward said columnar portion; and an insulator sheathed on said columnar portion for prohibiting the contact of said coil with said columnar portion.

Re claim 22 it is inherent that taped coil 2 insulates the coil from the columnar portion.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: Claims 12-18 and 20 are allowable because the combination of a self-adhesive

Art Unit: 2834

coil with the remaining structure is neither found nor fairly suggested in the prior art or any combination thereof.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tanake et al. teach combining a bobbin, coil and tape with adhesive epoxy resin to constitute a field coil into a substantially single unit in column 1, lines 34-45.
